ATTENTION  
THIS CHART CONTAINS OFF-ROUTE OBSTRUCTION ALTITUDES (ORCA).  
The off-route obstruction altitudes shown in this chart are based on the latest data available to the FAA. The ORCA is based on information available concerning the highest known features in each geographic area, including terrain and obstructions. ORCA provides obstruction clearance with a 1000 foot buffer in designated non-terrain areas and a 2000 foot buffer in designated mountainous areas within the United States. For areas in Mexico and the Caribbean which are located outside of the U.S. AICZ, ORCA provides obstruction clearance with a 2000 foot buffer. This altitude is provided for information only. It does not provide for NAVD83 signal coverage or communication coverage, and would not be considered with altitudes assigned by Air Traffic Control.

Example: 12,000 feet
